

## VARIAN LEGACY REFURBISHED SYSTEMS

Varian launched the XM Series of PVD deposition systems in the late 70's, with the 3100 and 3200 series of vertical Sputtering coming later in the early 1980's.

At Deptec we have many years experience on these toolsets and offer fully refurbished systems (sourced to order) and a whole host of upgrades to bring these systems into the technology and manufacturing practices of today's FABs.

Our in-house remanufacturing process, carried out at the Deptec 4500 square foot Facility with cleanroom area for final test is divided into 4 categories:

1. Tear Down
2. Sub Assemblies
3. Main Assembly
4. Final Test

Refurbished systems come with full installation and warranty for complete peace of mind, plus we offer systems components, consumables and second source parts to fully support you and the system.

We have many upgrades available such as: Full Control System Upgrade (screen shown opposite), Evo-Flo water flow upgrade, Sens-Save wafer detection upgrade, "Q II" replacement Magnetron and many others.

If you are interested in a refurbished system or having your current system upgraded, please contact [sales@deptec.com](mailto:sales@deptec.com) for more information.
